This package includes (1) Base Station
(1) 120 Volt Outlet Adapter
(1) Wrap-Around Beacon
(1) Key Ring Holder
(1) Set of Outlet Faceplate Screws

OCUTII BE IN THE KNOW

Base Station – TM-GW1-WHT

The TagMe Base Station is the smart data hub that communicates with & integrates all Ocufii beacons in your home system. The base station connects wirelessly to the home Wi-Fi network and plugs into a 120V outlet.

Locate the base station close to the Ocufii beacons and home Wi-Fi router for optimal system communication.

Wrap-Around Beacon – TM-B1-BLK

The TagMe Wrap-Around Beacon is a movement detection device developed by Ocufii. This beacon includes a silicone band and key ring adapter making it simple to install directly on any firearm, firearm safety device, storage case, or carrying bag.

Locate the beacon(s) close to the Ocufii base station for optimal system communication.

Download the Ocuffi App

2. Select App Store or Google Play (to be redirected to the appropriate store)

1. Scan QR Code on the screen or front of the product box)

3. Download App to Your Cell Phone

FAQ's

How many base stations can I have in my account? You can have a maximum of 5 base stations in an account.

How many beacons can I connect to one base station? You can have a maximum of 10 beacons connected to one base station.

What is the coverage range of a base station?

A base station has a maximum range of 150 feet radius in open air. Walls, furniture, & metal reduces the coverage range of the base station and should be considered when setting up a system. For optimal communication coverage, install the base station as close as possible to your beacons and Wi-Fi router. If needed, add another base station to get better coverage.

What is the coverage range of a beacon?

Just like the base station, walls, furniture, & metal reduces the coverage range of the beacons and should be considered when setting up a system. For optimal communication coverage, install the beacons as close as possible to your base station. If needed, add another base station to get better coverage.

How fast will I get a movement notification on my cell phone?

Getting movement notifications on your phone depends on the speed of your internet service, the speed of your cellular network, and your cellular coverage. Based on the different conditions, getting movements notifications on your phone can take from 5 seconds to 15 seconds from the time that we receive movement data in our cloud platform from the base station.

Can I install a beacon inside a metal box or safe?

We do not recommend that you install a beacon inside a metal box or safe as the metal enclosure will prevent any signal propagation.
